Instructions for use

If the swimming pools contain oily substances must be carefully cleaned before using Mayline POOL self sealing liquid. Verify the water content in litres of the swimming pool to be sealed. Remove the swimming pool's filters and insert the product. Insert reciprocating pumps into the swimming pool and allow the product to circulate for about two days. Reinstall the filters and activate the pool's pump to removes any fibres that are still in circulation. Wash the pools filters three times at 2 hour intervals. It is recommended to NOT use the swimming pool during the sealing phase. The pool does not have to be emptied once the sealing process has been completed.

Important note

It is recommended to NOT use the swimming pool during the sealing phase. The pool does not have to be emptied once the sealing process has been completed.

Sealing of salt water pools is not possible.

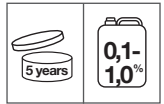

ATTENTION: Sealing is not GUARANTEED if there are moving lateral wall structures or if the foundation slab are too weak!

Protect the product from frost.

Mixing proportions

0.1% (1 litre of Mayline POOL for every 1.000 litres of water contained in the swimming pool). Increase the concentration in the case of large leaks.

Application time Circulate the self-sealing solution with immersion pumps (1 pump every 35-40 m3 of water) for at least 48 hours.

Security instructions

In the event of eye contact, rinse eyes thoroughly with much water and consult a doctor. In the event of skin contact, rinse well with water. Wear gloves and protective eyewear. Use water to immediately remove the product from objects such as tiles, flooring, wash basins, etc. Keep out of reach of children!

Disposal

For information concerning the disposal of effluent and liquid waste, please consult the corresponding safety data sheet.
